

Project Deliverables:

- Documentation
- Database
- Web Services App
- XML Data Model

Adivo®
TechWriter® 2007
 Family of Products

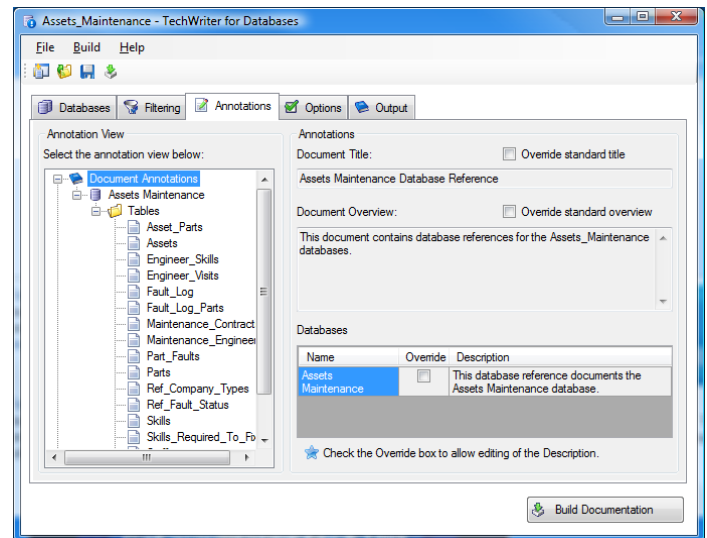

Include Professional Documentation with Your Next Project

The project is nearly complete. The databases are built, the XML schemas are in place, and the web services are processing requests. The only thing left to do is documentation. You need a TechWriter and you need one fast. It's time to put TechWriter 2007 to work for you.

TechWriter 2007 leverages the information locked inside your databases, web services and XML schemas to produce high quality technical documentation. And because the documentation is generated, TechWriter provides the completeness, consistency and accuracy that your customers are looking for.

Automate Your Technical Documentation

- **Save Time and Money.** Instead of spending hours writing and formatting documentation from scratch, you can finish the job in seconds with TechWriter.
- **Keep Synchronized.** Nobody likes outdated documentation. By including TechWriter in your automated build process your documentation can be regenerated with every new build.
- **Multiple Output Choices.** Create both printed and online documentation at the same time. TechWriter can generate your documentation in HTML Help, PDF, RTF/Word and Web site formats.
- **Easy to Use.** Throw out those clumsy and complicated authoring tools. TechWriter's tabbed user interface brings structure and simplicity to the process of document generation. Creating your first reference document is only a few mouse clicks away.
- **Easily Target Different Audiences.** Documentation generated by TechWriter can be targeted towards different audiences by controlling what information is included. Different topics can be excluded by simply selecting a check box. And using TechWriter's advanced filtering, you can set up rules to exclude information based on naming conventions. TechWriter also gives you control of the level of detail that is included in the documentation.

Find the TechWriter that You Need

- **TechWriter for Databases.** Generates documentation for database tables, views, functions and procedures. Supports Access, SQL Server and Oracle databases.
- **TechWriter for Web Services.** Generates documentation for web service methods and parameters. Supports any web service that is defined by a Web Service Definition Language (WSDL) file.
- **TechWriter for XML Schemas.** Generates documentation for XML schema elements, attributes and types. Supports XML Schema Definition (XSD) and XML DTD schemas.

Pricing

- Only \$99 per product, per computer.

Adivo®

TechWriter® 2007 Data Sheet

Documentation Generation

Advanced Filtering

- Explicitly filter specific topics from the documentation through a checkbox interface.
- Filter based on wildcard patterns that match item names.

Annotations

- Add and revise item descriptions.
- Import/Export annotations to/from a comma-delimited file.
- Export annotations to a SQL script (Database edition).

Customization

- Custom Language File allows over 100 alternate values for output headings and text. Can be used to support other languages or produce highly customized output.
- Database edition includes over 19 options for controlling how databases are documented.
- Web Services edition includes over 30 options for controlling how web services are documented.
- XML Schema edition includes over 30 options for controlling how XML schemas are documented.

Command Line Interface

- Can be called from build tools (e.g. MSBuild, Ant, NAnt)
- Parameters include project file, output type and refresh switch.

TechWriter for Databases

Supported Databases

- Microsoft Access 2000, 2002/XP, 2003 or 2007
- SQL Server 2000, 2005 and 2008 all editions except Compact.
- Oracle 9i and 10g

Items Documented

- Tables, Views and Columns
- Functions, Procedures and Parameters
- Indices, Foreign Keys and Triggers
- Column Data Types, Default Values and Required Indicator

TechWriter for XML Schemas

Supported XML Schemas

- XML Schema Definition (XSD)
- XML DTD

Items Documented

- Elements and Attributes
- Simple and Complex Types
- Content Models and Compositors
- Facets, Restrictions and Enumerations
- Namespaces
- Cross References

Output Formats

Supported Output Formats

- Portable Document Format (PDF)
- Compiled Help / HTML Help 1.x File (CHM)
- Word/RTF (DOC)
- Web site (HTML)

PDF Output Options

- Include a Table of Contents
- Include an Index
- Include Bookmarks

CHM Output Options

- Include an Index Tab
- Include a Search Tab

Web Site Output Options

- Specify a Top Page Name
- Specify a Page Template
- Specify Number of Levels in Table of Contents

Word/RTF Output Options

- Include a Table of Contents

TechWriter for Web Services

Supported Web Services

- Any web service that is defined by a Web Service Definition Language (WSDL) file or can produce a WSDL.

Items Documented

- Services, Methods and Parameters
- Elements and Attributes
- Simple and Complex Types
- Content Models and Compositors
- Facets, Restrictions and Enumerations
- Cross References

System Requirements

Hardware Requirements

- Computer - Intel Pentium II or compatible, 166 MHz or higher. Intel Pentium 4 recommended.
- Memory - 512 MB RAM.
- Hard Disk Storage - 1000 MB free space.

Operating System Requirements

TechWriter requires one of these operating systems:

- Windows 2000 Professional Edition.
- Windows XP, any edition.
- Windows Vista, any edition.
